

What Is A Dual Purpose Safety Knife?

- Easy open – no screwdriver needed
- Light weight, heavy-duty aluminum body
- Includes 6 heavy-duty blades within the knife
- Cut cartons, plastic straps, and pallet wrap
- Left and right hand usage

LH

RH

A safety knife is a spring-loaded, self-retracting utility knife that is used to more safely open boxes and cartons.

Allway safety knives radically reduce the incidence of minor accidents.

Allway safety knives are easy to use with either hand, and the blunted point blades virtually eliminate puncture wounds.

Note: Always use Allway KBS blunted point safety blades (made in the USA).

Easy Open and Extra Blade Storage

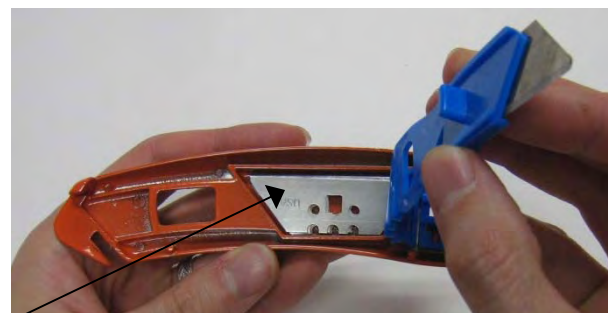

Depress the button.

Make sure you are not holding the body closed.

The knife opens and you gain access to the spare blades inside.

Within the knife body is space to store extra blades.

The DSRK-B6 ships with 1 blade on the slider and 5 extra blades within the knife.

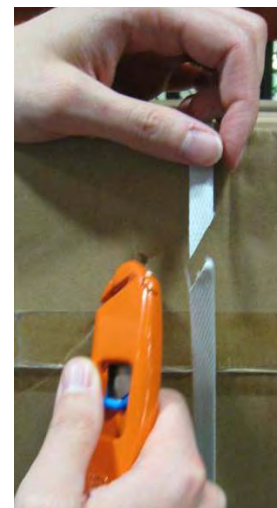

Plastic Strap Cutting

Hold the knife at an angle to the strap.

Hook the strap with the beak of the knife without extending the blade.

Complete the strap cut.

Always cut plastic strapping at a steep angle!

Pallet Wrap Cutting

Hook the beak of the knife into the film without extending the blade.

Cutting diagonally across, easily slice through pallet wrap without damaging merchandise.
